

Breaking through into a new era for our hospital

The Liverpool Health and Academic Precinct project has achieved a new major milestone, with work starting to link the new four-storey tower with the existing hospital.

Liverpool Hospital Acting General Manager Scott McGrath said the breakthrough process to link the existing Clinical Services Building with the new tower was a fantastic achievement for the project.

“It is exciting to see work starting on this important connection between the buildings,” Mr McGrath said.

“The redevelopment is really taking shape now and I am delighted we are one step closer to opening our doors to the community in 2024.”

Staff, patients and visitors will use alternate travel routes at the western end of the hospital during the breakthrough works, which will be completed in two phases.

Once the first phase is completed in the coming months, the second phase will start in early 2024 with further changes to corridors.

National Safe Work Month

The safety of our builders on the construction site is a top priority.

Our builder Lendlease held a state wide communication meeting in October with the construction workforce to reflect on National Safe Work Month.

Together, they paused to reflect on their high-risk jobs on site, analyse upcoming works, and reiterate the need for all workers to have the ability to go home safely each day.

Introducing Operational Commissioning

With the commissioning of the first phase of the Liverpool Hospital redevelopment in 2024, senior leaders and “superusers” will play a leading role in the transition of patients, staff and the community into the new building.

Hospital Acting General Manager Scott McGrath welcomed the start of the operational commissioning phase of the redevelopment.

“This phase will ensure that all staff and departments as well as patients and the community are fully prepared to move into the new building,” he said.

Commissioning Manager Natalie Irwin led an inaugural session for staff, providing an overview of the roles and responsibilities of senior staff and super users.

What is a super user? A super user is dedicated to providing support to their department to ensure a smooth transition into their new workspace when the building opens to the public in 2024.

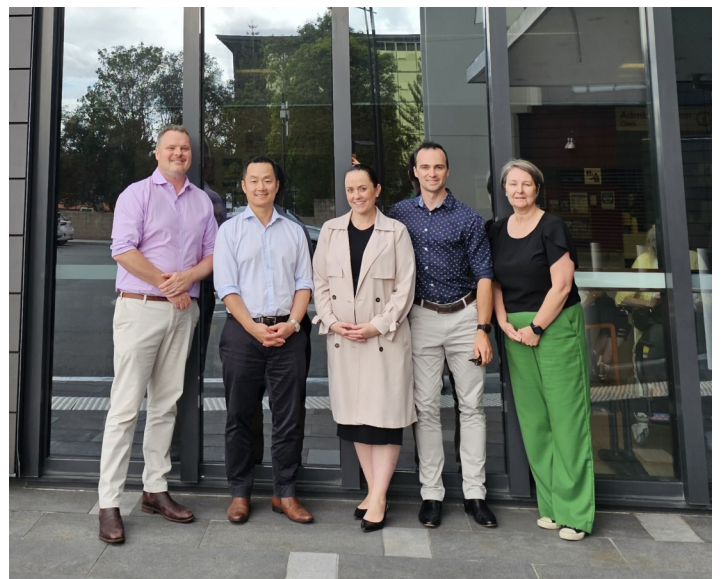

Developing future emergency care

A team from Liverpool Hospital’s Emergency Department (ED) has visited the busiest ED in Australia to gather ideas and information.

The Gold Coast University Hospital hosted the visit where the Liverpool team saw innovative technology and models of care.

“The Liverpool Hospital ED is also one of the busiest and we were keen to gather ideas to bring back to Liverpool’s new ED,” Edmond Park Senior Emergency Staff Specialist, said.

“It was a great opportunity as we continue to plan our future health care.”

Behind-the-scenes tour for State team

Health Infrastructure communications professionals from across NSW gained a first-hand insight into the Liverpool Health and Academic Precinct redevelopment during a behind-the-scenes tour of the project.

Members of the LHAP team led the group on the tour of the Birthing Unit prototype rooms as well as the future expanded Emergency and Pathology Departments.

The group also received an update on the progress of works and communications and engagement activities in the multicultural community.
