

Bright future for girls in construction

Our project team proudly launched its first STEM program at Buraga Gul Skilling and Employment Hub with 22 Year 9 students from Liverpool Girls High School last month.

Developed by our project management team JohnStaff Projects, the STEM program will raise awareness about the broad range of career paths in property and construction and encourage greater female participation in the industry.

Students heard from experienced industry leaders about the varied career paths including Architects, Engineers, Project Managers, Quantity Surveyors and Town Planners, and the challenges and opportunities that a career in the industry may present.

The girls received a great insight into mega infrastructure projects and what they involve from learning about the design process, how costs are managed on a building project, and hearing about what it's like for women in the STEM industry.

We know that the future is very bright for the next generation of women in STEM!

Maximising green space for the hospital

Our newly finished public outdoor area got the tick of approval from the children at Liverpool Hospital's Childcare Centre.

Our special little guests enjoyed the new space with a classic kids' game of "What's the time Mr Wolf?" and sat under the pergolas that are soon to be covered in beautiful vines, creating natural shade.

The invisible heroes in our buildings...

Most people wouldn't think that buildings move, but it's an essential consideration for construction projects. Movement joints allow buildings to move in response to forces such as thermal expansion and contraction, long-term shrinkage of structures, and in some cases, seismic activity – also known as earthquakes.

Our Engineering team reviewed movement, expansion, and seismic joints to be installed between the new and current hospital buildings.

Enhancing care for staff and patients

Our Surgical Short Stay Unit team are delighted to be receiving renovated patients bays that will be ready in coming weeks.

The department has an increased number of patient bays and now features two extra bathrooms and a kitchenette to continue enhancing clinical care.

Did you know? The solar panels installed on the new car park provide on average, enough electricity to power approximately 100 houses per day.
